On 13 June 03, trench *B900* was opened on the south side of the hill just south of Boyd's excavations and north of *B600*. This trench measures 5.13m on the N side, 4.24m on the E, 7.18 m on the S, and 6.15m on the E, with a small olive tree in the NE quadrant. Clearing and surface passes were begun with four workmen (Matina Solidakis, Georgos Kanitakis, Manolis Maniadakis, and Stelios) and two students (Anne Sassin and Abbie Bollans). Before excavation was completed, two other students (Jay Smith and Jordan Sanders) helped with excavation.

Trench *B900* was opened in the hope of finding several sections of wall as defined by a few large boulders in this area. The first pass (pails B900.1-3) opened up the northern half of the trench with three pottery pails, all of which contained a significant amount of Hellenistic pottery and animal bone concentrated mostly in the area of the olive tree in the NE quadrant of the trench. A second pass (pails B900.4-5) was taken in the southern half of the trench in an attempt to define potential walls. Two pottery pails were begun, although very little pottery and no bone at all came from this area. The ceramics from these pails date to LM IIIC, Archaic, and Hellenistic times.

Work was done on this trench for less than one week, and no architectural features were uncovered. Some potential sections of spine wall do still exist in this area and can be seen in the final section of this area. Mostly trench *B900* is notable for being Boyd's southern artifact dump based on the significant amount of pottery and complete animal jaws and long bones from the northern half of the trench, just below Boyd's excavations. The trench was closed on 17 June 03 and the final section was drawn on 10 July 03 based on surface elevations and final elevations after the first pass. No loci were defined for this trench other than B900, the surface clearing passes.

13 Jm 03

Started chaing 15900 with pail 15900.1. Started new pass- (15900.2).
after horta was cleared and dissing commenced. Apparently are in Boyds dumps, so there wa ton of onimal home and pothery.

16 Jm 3

Finishing up first pass with pail 18900. 3, then will move down the hill a bit to clear and make a pass on lower slope. Pass on lower slope. Harted as B900.4, which is turning up some surface pottery. Possible wall starting to appear (peralsa) around mid-trench. Mastly just huface clearing occurring, though.

Standed a new pail (18900:5) for well definition. Mostly taking out rocks and 17 Jm 03 Mril. Some pollery, de Coming up. Wall (ni lours get - still construe of its OK, now it seems it's not a wall-ness) looks like:

wall after all, so once against get a new trench, B1100, which is down the hill (South) of B900. See p. I for closing elevations, at least for the frist pass. Following are a picture of the clearing of P900 and a profile of the trench based on opening elevations and classing elevations of the first pass. If more works is done in this area, will return to profile.

10 July 03 - Final profile drawn of 13900.

Trench *B1300* was opened on 25 June 03 by SZP to the south of *B600* and the west of *B1100* on the south slope of the hill. The trench measures 3.72m on the N, 5.26m on the E, 4.85m on the S, and 4.82m on the W. Large, worked bedrock boulders bound the NW quadrant of the trench. Students (Anne Sassin, Abbie Bollans, and Erika Zimmermann) and workmen (Yiannis and Pandalis) helped clear this trench with SZP, but when excavation began with KK there were different students (Jay Smith, Jordan Saunders, and Eric Griffin) and workmen (Matina Soliadakis, Manolis Maniadakis, and Georgos Kanitakis).

This trench consists of a room as defined by the southern and western worked bedrock walls and a northern composite wall which was excavated as part of trench B1100 (locus B1107). The floor of the room is locus B1304, which consisted of yellowish packed soil. No roofing material was found in excavation, and our section below the floor with locus B1306 produced a loom weight and solely Archaic pottery before bedrock was found about 8cm below B1304. Whereas it is fairly certain that the floor dates to Archaic times, it is unclear when the bin feature of locus B1305 was built. The workmanship of the stone suggests some rocks were reused from their original purpose and hastily built into some sort of bin or other retaining structure in the eastern part of the trench, abutting the eastern bedrock wall. The bin measures almost 2m long and 0.75m wide with a depth of 0.4m. No artifacts at all came from the soil inside the feature. Also questionable in date is north wall B1107. This wall was excavated as part of trench B1100, but it is possible that stones from this wall were reused to face the northern wall of the room described by trench B1300. Directly adjacent to the eroded, composite bedrock bedding of wall B1107 is a row of worked stones to the south. It is unlikely these stones fell into a straight line, but they rest very oddly on the floor surface of B1304. Perhaps in later use of the room, tumbled boulders from B1107 were used to create a new face for the northern wall of

The remaining loci were clearing passes. B1303 was the locus of smaller tumble on top of the floor surface, probably created by deposition from wall B1107 and from stones higher up the south slope of the hill. Locus B1302 consisted of medium to large tumble throughout the trench, and most of this locus was removed with large picks. It is likely the tumble in this locus also came from the northern wall B1107 and from other walls uphill. Finally, locus B1301 included some very small stones, but was taken as a pass for clearing topsoil and removing modern wheelbarrow paths from the trench. Excavation lasted until 2 July 03, with a section taken through the floor on 10 July 03. Final sections of B1300 and B1107 (northern side) were completed on 14 July 03.

Trench B1300 is the southernmost room in a multi-room house that extends northward to include the two rooms in trench B1100. This room was initially used in the Archaic period, as evidenced by the pottery on and beneath the floor. However, the built feature of B1305 and the possible reuse of stones from B1107 indicate that, at a later date—possibly in Hellenistic times—the room was again inhabited. There is a fairly clear doorway in B1107 that would allow entrance and egress between B1300 and the southern room of B1100. Whether there was a main entrance to the house in B1300 is unclear. The southern portion of the trench is bounded by worked bedrock, and the eastern portion is greatly eroded. No main entrance has been found in B1100 either, though, so it is unclear whether B1300 is the back or the front of the house.

DESCRIPTION of PROGRESS of EXCAVATION [date each entry and identify associated pottery pail(s)]:

Swall election faller ato floor BI3H with pail B1306.1. 100% sceening; finding box, pottery in excavation and screen. Two shallow passes were John. Just pass produced object 1, a loon weight, wear the book wall (B1101) along with potting and bone. Pail 2 (B1306.2) produced vonce policy and one truy fragment of bone in the screen. Bedrocky substance appears to have been hit within about Four from floor surface.

Trench *B1100* was initially laid out on the south side of the hill east of trench *B600* and north of trench *B1300* in an area with several segments of potential spine wall. This vaguely quadrilateral trench measures 8.85m in the W, 6.15m in the N, 6.17m in the E, and 5.34m in the S. One week later, an extension was added to the trench along the northwest. This section of *B1100* measures 3.8m in the W, 9.46m in the N, 5.91m in the E, and 11.81m in the S. The southern boundary of the extension runs from the eastern boundary of the original *B1100* uphill past *B600* and *B900*, nearly to Boyd's southern stone dump. Locus numbers associated with the original *B1100* include B1100.1-8, B1101, B1102, B1103, B1104, B1105, B1107, B1108, and B1115. Locus numbers associated with the extension include B1100.9-12, B1106, B1109, B1111, B1111, B1112, B1113, and B1114.

B1100 (original trench)

Initial clearing of horta and topsoil was done on the original *B1100* on 17 June 03. Three workmen (Manolis Maniadakis, Georgos Kanitakis, and Matina Solidakis) and various students (Jay Smith, Eric Griffin, Jordan Sanders, Alexandra Drellos, Meredith Feuquay, Krista Judge, Stephanie McDiarmid, and Pam Schwartz) participated in at least one day's worth of excavation in this trench and the extension.

This trench was begun in the hopes of finding a habitation area based on the worked bedrock that could be seen above the original soil line. What this trench produced was one room in a house bounded by walls to the north, west, and south. The original Archaic floor surface was excavated as B1105. Whereas pottery from the floor dates to both Archaic and Hellenistic times, locus B1115, the section through the floor, produced ceramics of only Archaic date. This section was taken in the NW quadrant of B1105, as the rest of the floor surface in the trench was badly eroded down to the bedrock in the east. The floor of this room is described by three walls: B1101, B1102, and B1107. West wall B1101 is likely the first wall built, as the two crosswalls abut it. Wall B1101 is cyclopean in style, as the largest worked stone associated with it measures 1.10m in height. This western wall continues northward into the extension of trench B1100 and appears to end at an area of consolidated bedrock approximately 2.5m into the extension. B1102 was defined as the northern <u>crosswall</u> to B1101 and is composed of several courses of worked stone and bedrock. The two uppermost courses consisted of flat worked stones of approximately 15cm in height, whereas the lower courses abutting B1101 consist of lower quality, rounder worked stone. A doorway can be seen in crosswall B1102, including one tall rectangular stone for the doorjamb and two separate thresholds, one built atop the other. The wall peters out to the eastern boundary of the trench into bedrock bedding. The dividing wall between B1100 and B1300 was given the locus B1107, or the southern crosswall. This wall appears to have been built on a bedding of rocky fill with worked, faced stones on top. Whether the worked stones toppled or were purposefully placed in a row to the south of the bedding in trench B1300 is unclear. Both walls B1102 and B1107 appear to have doorways in their eastern portions. After crosswall B1102 was defined, the area to the north of it was renamed locus B1104, a portion of a northern room. However, after one pass it was decided to wait and excavate it with B1100 trench extension. See below, locus B1109, for more on this.

All other loci associated with the original *B1100* were clearing passes for the room. Locus **B1103** contained the <u>medium-sized tumble</u> on top of floor surface B1105 within the three defined walls. Stratigraphically above B1103 were pails **B1100.1-8**, which went through <u>topsoil</u> with <u>small rocky inclusions</u> throughout the entire trench. Finally, locus **B1108** is a <u>clearing pass</u> for the northern side of wall

<u>B1102</u> within room B1104. Excavation was completed on 26 June 03, and final sections through room *B1100* and wall B1101 were completed on 14 July 03.

Based on the finding of three walls (B1101, B1102, and B1107) and remains of an eroded floor surface (B1105), it is clear that the original B1100 trench is a room. From the doorways and thresholds in crosswalls B1107 and B1102, this room appears to be in the middle of a multi-room structure. Objects found in this trench include two spindle whorls and a bronze pin, but it is unclear from these objects whether the room had any special function other than a habitation area. Based on the doorways in both crosswalls (B1102 and B1107), this room communicated with B1300 to the south and with B1100 extension to the north. However, this room is largely eroded—the floor surface did not extend much to the east of B1101, and the crosswalls were preserved to the height of only a few courses. The doorway of B1102 appears to have been blocked up at some point, possibly after the floor was raised. There are two distinct thresholds in the doorway through this wall, likely from two different periods of occupation. The blocking of the doorway of B1102 indicates that the northern room in this structure (B1100 extension—see below) was likely not used for habitation after the Archaic occupation. The present, southern room continued in use, as Hellenistic pottery was found in this trench.

B1100 (extension)

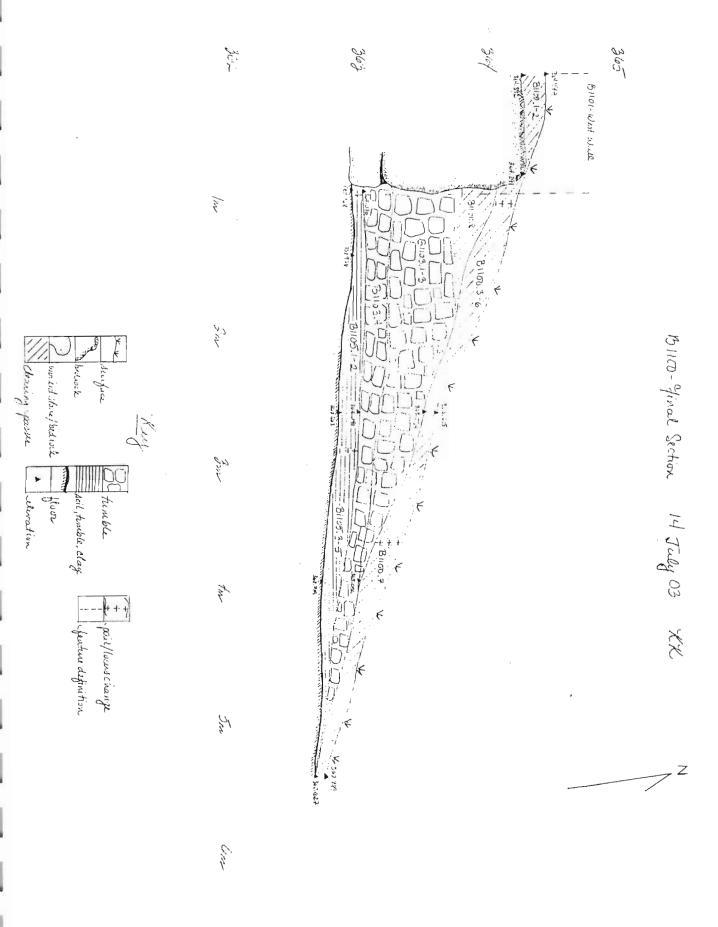

The extension to B1100 was opened on 23 June 03 in order to extend the trench to the north, in the hopes of finding the continuation of the house evident in trenches B1300 and the original B1100, and to the west, in the hopes of finding portions of spine wall and a northern terminus to wall B602.

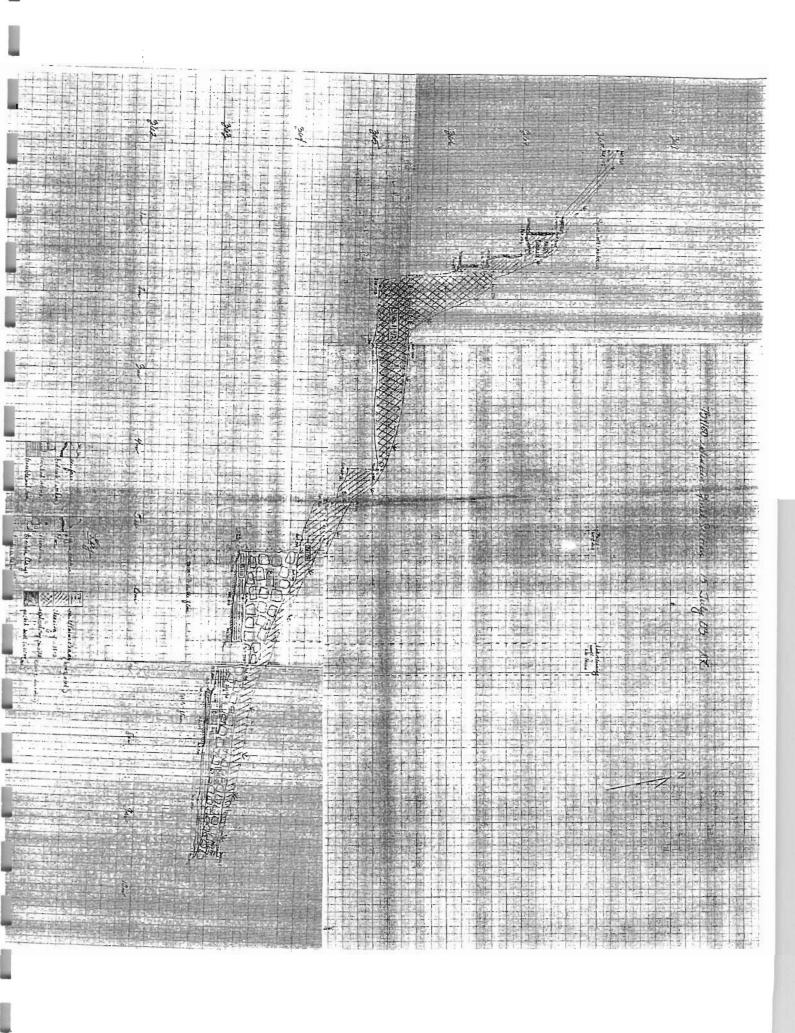

The western half of the trench was rather devoid of architectural evidence. Surface passes were taken as pails B1100.9-10, and two further passes (B1100.11-12) were taken to find a terminus to B602 m the southeastern part of the trench, north of B602. A portion of spine wall is evident in the western, uphill half of the trench extension and is reflected in the final section, as is the search for wall B602. Excavation did not produce a conclusive end point. Once locus B1106 uncovered the top of the continuation of wall B1101 running from south to north, excavation in the western half of the trench was abandoned and work concentrated on the room in the lower, eastern half of the trench.

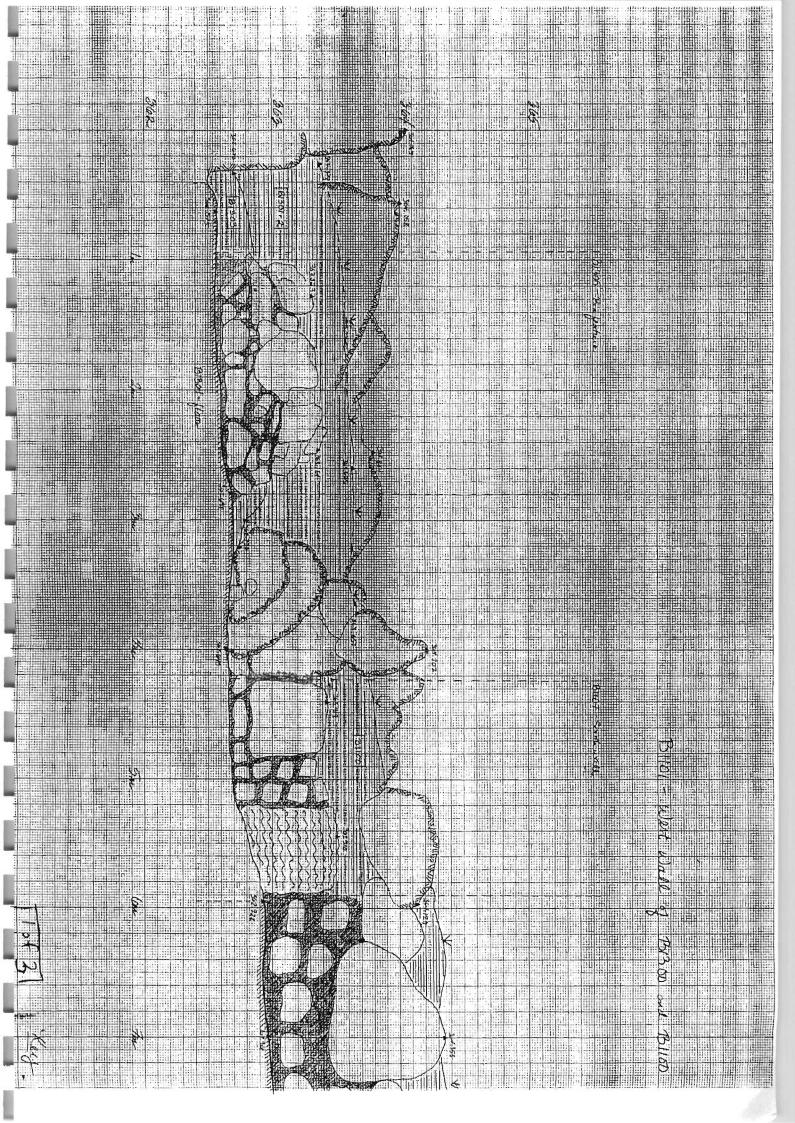

The room in B1100 extension is described by wall B1102 in the south and wall B1101 in the west. There is a possible northern crosswall consisting of worked bedrock and other stone, but it is badly preserved and therefore unclear whether it is tumble or a wall. After this pseudo-wall was found under two loci of tumble (B1109 and B1110), no further excavation was done to the north in this trench extension. Because of the eroded nature of the floors in B1300 and B1100, the floor in B1100 extension was sectioned carefully. B1113 is what remains of the floor of this room and consists of a yellow-green clay surface and a few thin schist paving stones in the southern end of the room, a few centimeters north of wall B1102. Pottery from this locus and from B1114, the section through the floor, indicates an original Archaic habitation level. Stratigraphically above the floor are two layers of tumble. B1112 consisted of medium to large tumble on top of the floor surface and extended from east of the giant boulder and locus B1111 to the eastern limit of the trench. Locus B1109 is also a tumble/clearing locus which extended from B1101 eastward to the limit of the trench and is the first locus beneath the surface cleaning passes of the trench. B1109 officially united the original and extension trenches of B1100 east of the giant boulder as the locus passed southward through B1104. Locus B1111 is

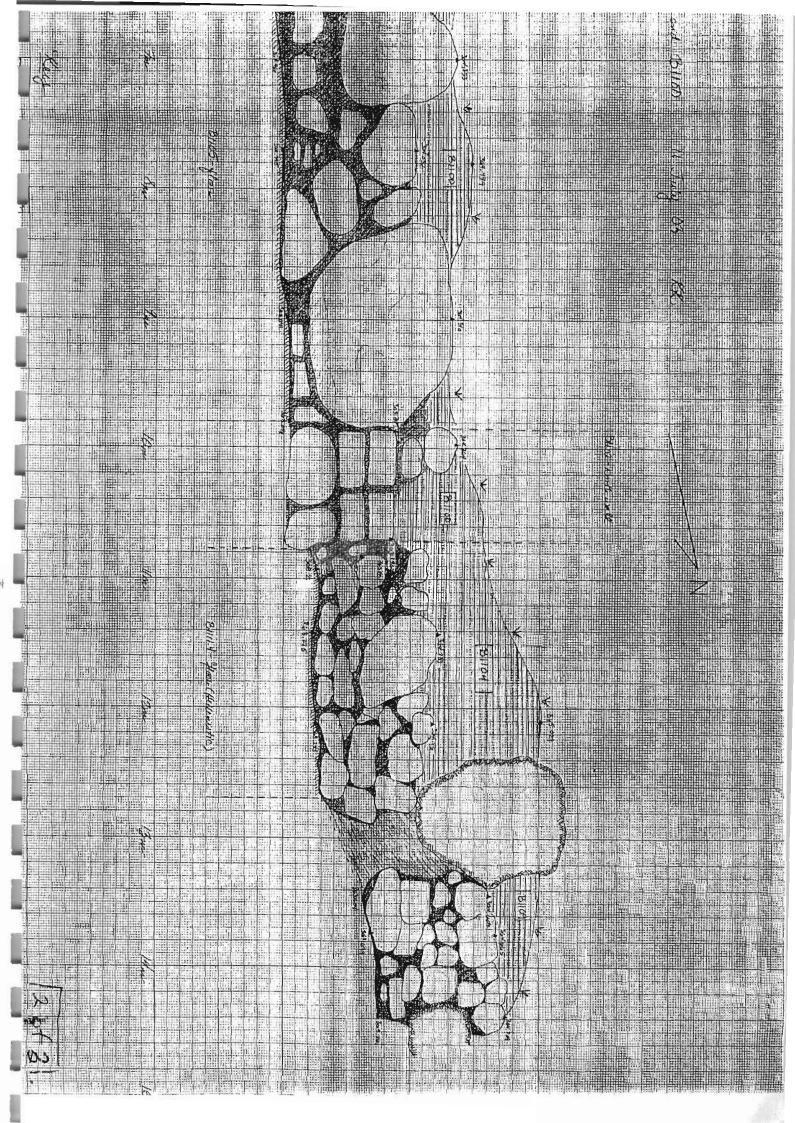

stratigraphically later than floor surface B1113 but earlier than the tumble loci B1104, B1109, B1110, and B1112. B1111 is a potential bin or retaining wall feature in the western half of the trench, abutting west wall B1101. This locus spans both sides of the giant, pedestalled boulder and is characterized by linearly placed worked stones that run from wall B1102 northward to the probable bedrock limit of the room. Interestingly, significant amounts of pottery and bone were found within and just outside of retaining wall feature B1111. Most of the pottery was Hellenistic, including a stamped amphora handle and a relatively complete lichnari. Other objects from this locus and from B1110, the locus directly above B1111, include metal arrowheads, iron nails, spindle whorls, and loom weights. Much of the pottery has no comparanda, indicating the potential presence of a ceramic workshop somewhere on site. In addition to the pottery and animal bone, the soil consistency and smell were quite odd, begging the conclusion that this retained area was used as an all-purpose dump in the Hellenistic period.

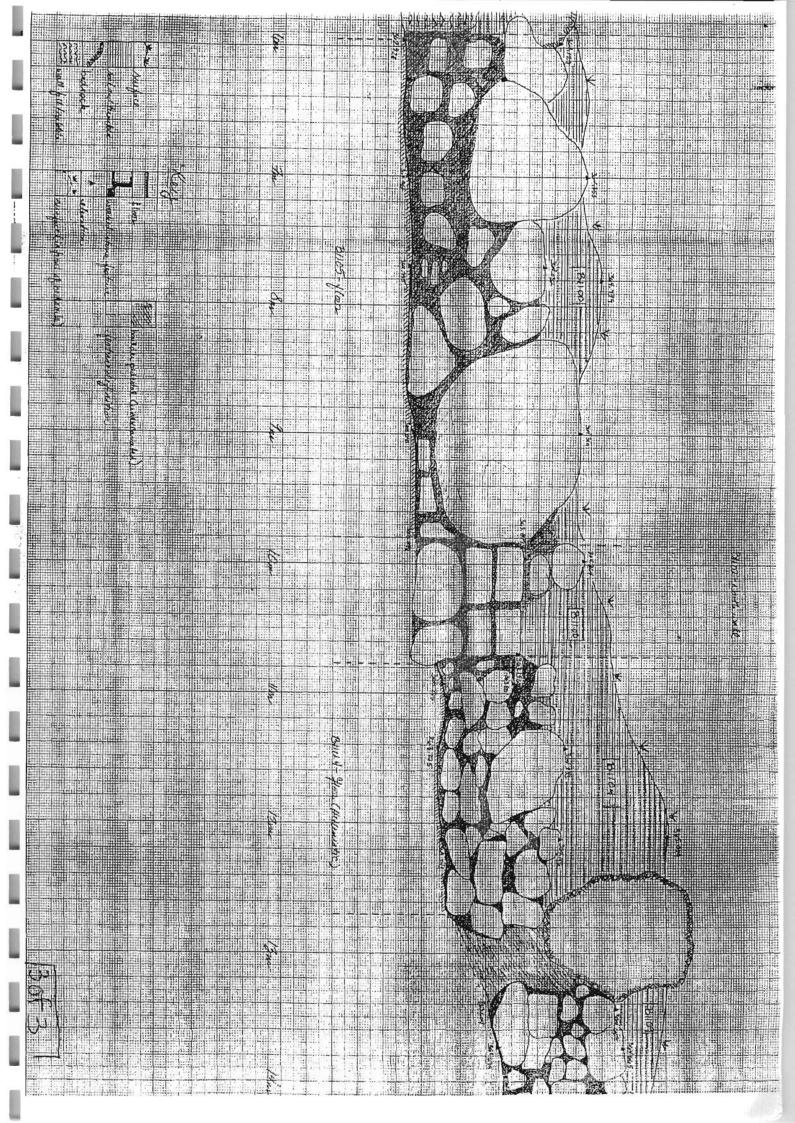

The B1100 trench extension provides an interesting depositional history for the house composed of B1300 and B1100. While all three rooms have floors of Archaic date, all three rooms also show evidence of reuse at a later date. B1300 has a later bin or other built feature, and B1102 shows evidence of creation of a new threshold and blocking of the doorway. It is likely that the changes to B1102 were contemporary with the reuse of the northern room in B1100 extension. At the time the quick retaining wall was built in the northern room, the doorway in B1102 was blocked to prevent further habitation in the northern room of B1100. The northern room was then used as a dump for pottery, bone, and other objects. Based on the style of architecture, it is likely that bin feature B1305 was built around the same time as retaining wall feature B1111. Over time, as bedrock fell and washed down the south slope of the hill, large boulders and erosion channels collected and preserved the numerous artifacts found in this northern room. Locus B1111 was not excavated to the Archaic floor level this season, as there was not enough time. This trench was closed on 9 July 03, and a final section through B1100 extension was completed on 15 July 03.

Year 2003 Trench/Locus B/100 Excavator KK

DESCRIPTION of PROGRESS of EXCAVATION [date each entry and identify associated pottery pail(s)]:

Gave up on finding a wall in the trubble of B900, so we moved downhill (south) and clast of SP's truck B600. Started a pail for townerforthing coming out of surface cleaning (B1100.1). See p. 1 for opining elevations, measurements of trunch. No bone found in cleaning pass. Started new pass + pail (B1100.2) as we started excavation purper of B1100. Some potting coming up; attempting to define prential wars. Started a new past as we moved down the truch to the if any were definition could be had downhill (B1100.3). Potting (large of thoseheds) and bone coming up. Enough work name up to be called a wall and therefore a new locus, B1101.

Is Jon 03 finishing yesterdays pass with B1100.4. Students are screening 5 20mbilians of diet. Will take standard soil womple from B1100. Plan to take 2 more parks of B1100 to remove warface crop (to prevent contamination further down). Starting new parks (B1100.5 + B1100.6), defining rocks to find potential currentle. Found a couple course of cromvall B1102 and another potential currently coming up in the east of the trench. Hopefully once 2 currently one defined the area between them can be re-lown-ized.

19 Jone 03

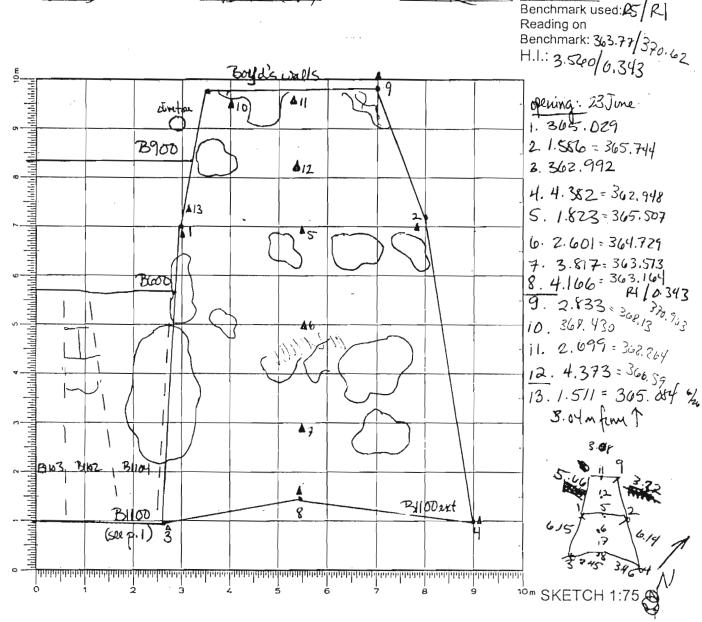

Stocked but suffice pars as \$1100.7 across the southern end of the truck. Took standard soil sample for locus 1100. Soverner of truck is yielding a lot of policy this worming. Parsibly coming down on rock flow in Solcher of truck—maybe room is just eroded out. Finished pars in Softench (BN007) and are cotoring to remove trumble in N. central part of trench to see if we can find roof floor in Ne counter of probable room (poil \$1100.8). Policy + bone coming up in this pass. Closing elevations for first pass faken this maning to produce section. See back for quick section dianing of first pass. See other (lower stratigraphically) low furture elevations/section.

Excavata KK P. 4 Trench/Low B1100 15 Jone 03 (cont'd) rough profile of B1100, first pars A 2 John Chondelles Controlles Co ~ opening (donneles. (see p.1) 23 June 13 Extended trench to to find rest of room B1104 and passibly the house. Extension measured, elevations taken, surface clearing commenced Trawing on p.5. Surface closing will be pail \$1100.9; all new excavation affectliss will be given a new lows. Middle elevations: OK, got on extension to the giant, evil, hilly trench extension and now have a again. Took more relevations (see p. 5) and measurements. Still on renface cleaning pars. Separate plan/profile made for extension. Will consider Consolidating later. 24 Jone B Making another purface part across B100 Wtension (B100.10). Polley, bone emerging. One rea pebble. altimpting to find wall upslope. Now hacking through with kazmas because the existing part of the wall is probably whould I'm lower. Inturior digging with kazmar in NW corner of trench to attempt to uncorner continuation of wall B602. Pail for this part is B 1100.11. Students one chaning houted + loose dist from outside eartern edge of trench in case we will to Lots of Hellevistic potting energing (per MSM) from this onea.

XCAVATION [date each entry and identify associated pottery pail(s)]:

19 June 03

Ragon B1103 after pail B1100.8, which went through some wall trubbe. allingting to define wall B1101 and find the crasswall. Spindle wholl found in Dw corner of 1103 between 2 pieces of bedrock (one of which has whinsed - wire pedestating it), recorded as object I for this pail. Elevation not tallin, as it was found in cleaning area hetween boulders.

To June 03

Taking mother pass through B1103 this morning, as there's still tunible south of wall BITOI. Will extend excavation area downslope to remore some truble, then will more a cross to learth for crosswall in The of the trench. Wall night be relusive if MEN, Marotis & I are right that there was unbloke fill. Second pass of the day begon with a new pail, B1103.3, as we finish cutting into the tunuble. New pail is for pass that starts at PS1102 and continues & of big, our orging boulder to elusive crossoall/fill in & of tench. Took standard voil somple from pail61103.3.

23 June B

Starting on other past to find roof/wall material (B1103.4) across entire room. When found, will revioue as new lows and take intensive toil sample. Will seven beneath touche. Touchde in a corner of noon includes giant root intrusion. Soil in B1103 too wet to dig and science. Will allow to dry while we stake, measure, elevate o clear extension to B1100 (see that locus, pp. 5-7). Bottom of B1103 (below tumble) renamed as B1105.

DESCRIPTION of PROGRESS of EXCAVATION [date each entry and identify associated pottery pail(s)]:

2 July 03

Storted a new locus for trible that oppears to be in a room. Large boulder seems to divide room into SW half (B1104) and NE half (B1104). Tomble locus started to unify B1104 & B1109 into one room, atthough economically me not yet defied. Some trible in B1104 was previously pruled out (see that locus sheet). New pair started (B1100.2) to bring onea NE of bowlder to level of any Sary boulder is in will screen 5 sambili of this tomble is take a stail sample for this locus. Lots of bow, polley coming out adjacent to boulder. Obj. I (metal lower) found adjacent to NE inde of houlder ("claric"), along with obj. 2 (nail - in screen), obj. 3 (arrow), and obj. 4 (nail). Carbon, nail, polley, bone in 1/4" screen.

3 July 3

Pail B1110.3 started across untile "room" to dig into tomble M both Moder of the rock (boulder). Bronze pin found; elen 1,949, R5, Rob 1.665. Made obj 5. Ohj 6 is a terracotta loose weight 91.757 alwation, some 2B. Both on NE pide of boulder. Obj 7 = sepindle when on NE pide of boulder. Obj 7 = sepindle when NE pide of boulder. Obj 7 = sepindle when R5/1629. Elevations for closing of passes 73/110-3 × 4 = 85/1629. Elevations for closing of passes 73/110-3 × 4 = 80.850 = 363.479.

6. 1.493 = 363,666

7. 2.152= 363.207

8. 2.098 = 363.261

Obj. 9 = loom wight with alw. 2.055 of R5, RoB1.589 on 5W side of rock. 100 % Screening with pail B(110.5, Clail B)110.4 is the same as B(110.3 - too much pollery for one bog.) Shject 10 is a what stake large neil from the NE area (Ne map) at ZD25, R5/RB 1.535, Pail B1110.6 is just 2nd bag of potting from B1110.5. 52 standard Into Year 2003 Trench Clows Billo Excavator KK p. +

3 July 03 (conta)

Excertine amounts of home, postury coming up in today's pars. It happy arrivally home (2 from 14" sum, 2 from excasotion) and too much fragmentary pottery for one may - pails [1105.3, 1105.05 split into .4 + .6, respectively.

Six objects in today's parses - all objects seem to be concentrated a laro awas; one to the N6 side of boulder or one further N6 than that . Current interpretation is that Hellewstic use of Auchic architecture was or a dump of tome tout. No bone, etc. from 31105.4, a by they just pollery pail continuations. Stondard soil sample tohen at end of day oppours to have unconsed a soil sample tohen at end of day oppours to have unconsed a soil sample tohen of prince coming tomorrow. No carbon fourd in "4" screen, but large church of prince coming met in excavation; a few shells too.

4 July 03

Taking a small pass across entire truch from sond to ME to SW to define some large rocks for removal (B1110.7). 100% Acceeding of entire pass. Lots of bird, policy in this pass too.

oby, 11 Pollo,7 iron mail NE model boulder 363.239
Oby, 12 Pollo,7 lichnari Eside of boulder 363,217

Objects include an iron vail and a complete lichnair. Photos taken of the later. Soil on SW Mide is rocky + friable; on NE side is looser and wetter "
more dark brown. Coming down on dark brown clayey soil in all wear of
trench - withhase it out and what new locus once we dig fluorigh. Two pails
for this pass are Combined (BIIO7 and BIIO.8) - are the same poil technically.

DESCRIPTION of PROGRESS of EXCAVATION [date each entry and identify associated pottery pail(s)]:

4 July 03

Started new locus BIII for anea & wo of linear accumulation to either order of gint bedrack bonder. Pail for area to Sw is BIIII.1 and to NE is BIIII.2. Both pails are being screened 100% (imparately).

BIII.2 is not producing much more policy, just stone. Stondard or a Sample taken from BIIII.1. Oby I is a small stone object that TXCH requested he sent down as on object - store tool? Unknown or givetion other than BIIII.1. Soil on Swinds of locus (BIIII.1) is looser and well than BIIII.2. Latter has showled to come down on numerous racks after a pars with few large stones. Will assest on showly with there or not be continue excavation in area of BIII.2. BIIII.1 (just outside whether on not be continue excavation in area of BIIII.2. BIIII.1 (just outside of wall 25102) still producing artifacts/home. St. still sample taken still. I was BIIII.3.

Taking onother pars in onea SW of boulder (hereath BIIII. 1). Still screening 1007. in this area. Soil smells odd in this law, especially near boulder. New pars in area SW of boulder as pail BIIII. 4; man boulder. New pars in area SW of boulder as pail BIIII. 4; near boulder. New pars in excarate this area with me hit different soil or efforting waterial. Soil is dry and crumbly, but was in smil or efforting proofing material. Soil is dry and crumbly, but was in smil for this locus prior to photography. Elevations taken at close of this for this locus prior to photography. Elevations taken at close of this pars a after photography. Author excavation in this area will likely get a part of least.

Low opposition a hind of historical Hellewistic dump—the live of stone could be a retaining wall built ento the floor of the skieting Orchaic structure, when of the socilianiste the low smell odd (human/animal woode?), and wome just to the E in B1116 does as well. Today a excavation of B1111 made the small sectaining walls clearer. In new 10 cus will be started when we west excavate because we are now of a passible buchaic floor surface—although it is not sure it would continued with tollewistic makeral.

Year 1503 Trench/Locus B11/2 Excavator KK

DESCRIPTION of PROGRESS of EXCAVATION [date each entry and identify associated pottery pail(s)]:

7 July 03

Begon a new lows for wear ordered B1110 (oppositing flow Sure of touts of ond E of B1111 (outside stone accumulation). The toking on pass in this area (B1112.1) to see if we're coming down on a roof in flow. 100% sciencing the North brown, cumply soil. When then about in last few pails of B1111 but not yet clayey. 52 stondard will wruple token after opening elevations. B1112. I is a deoring pure wall by the trench E of low B1111. One normal pass being token to chase passible ceiling soulpice and will likely section again later.

Study 03 finding trufe yesterdays part with pail B112.4 (see map). Not much finding trufe yesterdays part with pail B112.4 (see map). Not much vool floor clay found. Howards NE quadrant of trench, hit upon different color worl (nive yellows due) and remains of passible crossweel—if it is a wall, it is body preserved and recoded. Here appears to be a worst of built feature in the E portion of the trench. It hasn't have given a new loars yet but hears to be a kind of him is platform. From area to N word be excavated further right now—probably not this hearton. So truck line is cut short in the N for the rest of the minute. Prin feature has deal Grown, we thish soil in it. Findes from middle mention. Prin feature has deal Grown, we think soil in it. Findes from middle which is included in B112.4, along with bare excavation of which is roome waterial. Object *1 is a wetal hail found in the new NE course of the ten ch. Removed a few stones from the bin in the middle of the room a decided it he like by just collapse from wall B1101 when the of the room a decided it he like by just collapse from wall B1101 when the store of the form the hill. B1112.5 is the same pass or B1112.4 but the second large Grow of Poolean.

Trench/Locus B1112 Excavator KK p. 4

8 July 03 (contal) In issum, the day was spent in taking one part through mostly the NE quadront of the tread in anotherest to find promble vool flow material and notate it for future digging as a separate louis. However, we found that the best-preserved portion of floor/ceiling is likely in the SE quadront of the hende. He med yielded an object and there was debate about the feature-ness of the stones in mid-trench. Ut was eventually deaded they were tomble from B1101. A parishe crosswell was identified as a badley croded feature but not your a lows. Excavation + screening have produced policy, bone, and some purice. Will rection floor tomorrow as new Coars to isolate the Composint from the Heilemetic damp.

Began a new park through E half of trench!

To remove further small truske and use if there was \$31112.7

is any were floor to the badly-eroded E end of Start & 31112.6

The area. 1007. Screening still, with polley and bone energing in Julean and excavation. Soil is dark brown with much to median vocks. Began a 9 July 03 new pars (B1112.7) near PSFR+ locustill to define pseudo-ciosswall ch N' of trevely. Defined a big rock - everything else seems to be tomble from BILOL, BILL, or :11-defined crosswall to N.

Locus was closed, as no further excavation will be done on this locus, as S section has been partitioned and we have hit ending bedieved on the Sound in this area. BIII2 tidat produce much as a looms-one object and no architecture, although a hyrificant amount of pottery. We hit bedrock quickly, so the floor muface in this area of the French is some.
