

Kozuki N, et al. The associations of birth intervals with small-for-gestational-age, preterm, and neonatal and infant mortality: a meta-analysis.

Supplemental Table 1: Adjustment variables used in the adjusted logistic regression analyses, by study

Country	Socioeconomic adjustment variables	Maternal nutrition adjustment variables	Reproductive health variables
Brazil (1982)[11]	Income, maternal education	Height, BMI	Maternal age, parity
Brazil (1993)[12]	Income, maternal education	Height, BMI	Maternal age, parity
Brazil (2004)[13]	Income, maternal education	Height, BMI	Maternal age, parity
Philippines (1983)[15]	Land ownership, literacy, housing structure	Height, BMI, MUAC	Maternal age, parity
Zimbabwe (1997)[14]	Income quintiles	Postpartum MUAC	Maternal age, parity

Kozuki N, et al. The associations of birth intervals with small-for-gestational-age, preterm, and neonatal and infant mortality: a meta-analysis.

Supplemental Table 2a: Unadjusted and adjusted associations between birth intervals and adverse newborn outcomes, by study

Study name	Birth interval	SGA (Reference: AGA)						Preterm (Reference: Term)

Kozuki N, et al. The associations of birth intervals with small-for-gestational-age, preterm, and neonatal and infant mortality: a meta-analysis.

SGA = small-for-gestational-age, defined as below the 10th percentile of the U.S. 1991 reference distribution described by Alexander and colleagues [19]. AGA = appropriate-for-gestational-age. Preterm = below 37 completed weeks of gestation

Kozuki N, et al. The associations of birth intervals with small-for-gestational-age, preterm, and neonatal and infant mortality: a meta-analysis.
