GILLINGS SCHOOL OF
GLOBAL PUBLIC HEALTH

Disclosures

- The project was funded from the following sources:
 - NIH/NIDA R36 DA04588501(PI: Young)
 - NC TraCS 2K Pilot Award 2KR1071805 (PI: Young)
 - This research was partially supported by a National Research Service Award Post-Doctoral Traineeship from the Agency for Healthcare Research and Quality sponsored by The Cecil G. Sheps Center for Health Services Research, The University of North Carolina at Chapel Hill, Grant No. T32-HS000032.
 - The database infrastructure used for this project was funded by the Department of Epidemiology, UNC Gillings School of Global Public Health; the Cecil G. Sheps Center for Health Services Research, UNC; the CER Strategic Initiative of UNC's Clinical & Translational Science Award (UL1TR002489); and the UNC School of Medicine.
- Co-authors:
 - ND's effort was supported by the US Food and Drug Administration (HHSF223201810183C).
 - MJF receives consulting fees via UNC from GlaxoSmithKline.

Background

Data: The Backbone of our Research

Prominence of Insurance Claims and Electronic Medical Records (EMR) in Pharmacoepidemiology research

How does our choice of data source impact our research?

Objective

Motivating Research Aim:

Risk of prolonged opioid use following surgery

Objective

Motivating Research Aim:

Risk of prolonged opioid use following surgery

Today's Focus:

Using EMR and insurance claims, compare proportion of patients with opioid use in the context of 3 key study design elements

Data Sources

Population: N=5,975

Medicare patients undergoing surgery at UNC, 2015-2016

Data Sources

Population: N=5,975

Medicare patients undergoing surgery at UNC, 2015-2016

Data Sources

Population: N=5,975

Medicare patients undergoing surgery at UNC, 2015-2016

- Prospectively collected at the time of healthcare delivery
- Basic demographics (age, sex, race)
- Diagnosis and procedure codes
- Dates of service, admission, and discharge

Discussion

Summary

Limited overlap in opioid use between data sources

*Less than half of surgical patients had agreement between claims and electronic health records on **whether opioids were even prescribed**.*

Baseline: 182 days pre-surgery

Prolonged use: Rx in 3 consecutive months post-surgery

N=5,975 Medicare patients undergoing surgery @ UNC Health, 2015-16

Critical Questions

EMR: How “new”
are new users?

Critical Questions

EMR: How “new”
are new users?

Claims: How often is the
exposure administered in
the inpatient setting?

Critical Questions

EMR: How “new”
are new users?

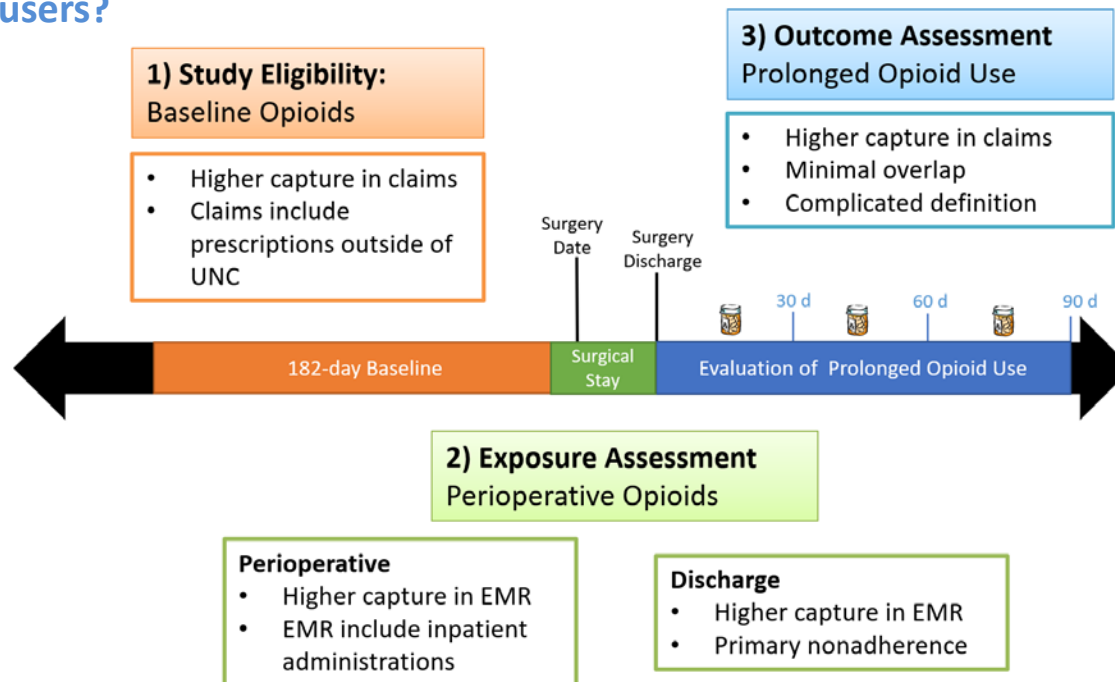

Claims: How often is the
exposure administered in
the inpatient setting?

Claims: Are we missing
“exposures” paid for
OOP?

Critical Questions

EMR: How “new”
are new users?

Claims: How often is the
exposure administered in
the inpatient setting?

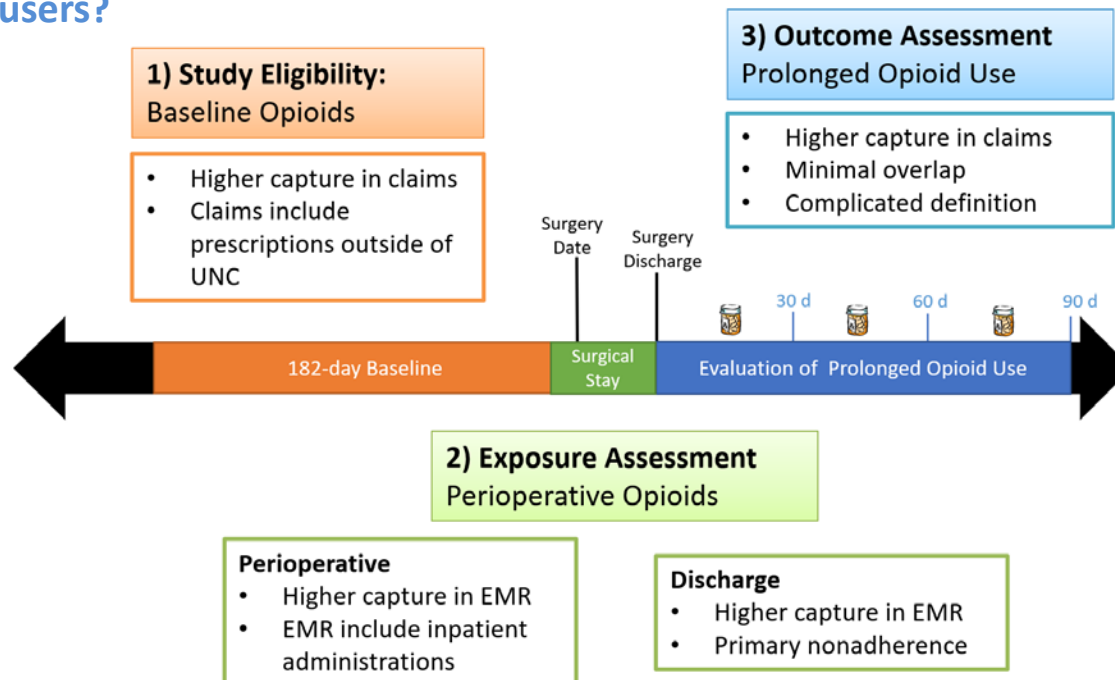

Claims: Are we missing
“exposures” paid for
OOP?

EMR: Are “exposed”
actually exposed?

Critical Questions

EMR: How “new”
are new users?

EMR: Are we
undercounting
longitudinal
outcomes?

Claims: How often is the
exposure administered in
the inpatient setting?

Claims: Are we missing
“exposures” paid for
OOP?

EMR: Are “exposed”
actually exposed?

Critical Questions

EMR: How “new”
are new users?

1) Study Eligibility: Baseline Opioids

- Higher capture in claims
- Claims include prescriptions outside of UNC

3) Outcome Assessment Prolonged Opioid Use

- Higher capture in claims
- Minimal overlap
- Complicated definition

EMR: Are we
undercounting
longitudinal
outcomes?

Claims: Are we
missing outcome
events paid for
OOP?

2) Exposure Assessment Perioperative Opioids

Perioperative

- Higher capture in EMR
- EMR include inpatient administrations

Discharge

- Higher capture in EMR
- Primary nonadherence

Claims: How often is the
exposure administered in
the inpatient setting?

Claims: Are we missing
“exposures” paid for
OOP?

EMR: Are “exposed”
actually exposed?

Lessons Learned

Both EMR and Claims data are
valuable resources for health
care research

Neither data source is
perfect

Lessons Learned

Both EMR and Claims data are valuable resources for health care research

Neither data source is perfect

Linking EMR and Claims gives us a more complete picture

Linkage still doesn't offer a complete view of the "truth"

Lessons Learned

Both EMR and Claims data are valuable resources for health care research

Neither data source is perfect

Linking EMR and Claims gives us a more complete picture

Linkage still doesn't offer a complete view of the "truth"

Linkage can facilitate quantitative bias analyses

Challenges with estimating bias parameters

Lessons Learned

Both EMR and Claims data are valuable resources for health care research

Neither data source is perfect

Linking EMR and Claims gives us a more complete picture

Linkage still doesn't offer a complete view of the "truth"

Linkage can facilitate quantitative bias analyses

Challenges with estimating bias parameters

Context!

Must understand the data + proceed with caution
