This study describes an analysis of the educational resources found on the thirteen presidential library websites that are administered by the National Archives and Records Administration. The survey was conducted to determine the availability, variety, and content present online among the presidential websites. All of the libraries provided some educational resources from lesson plans, bibliographic, biographic, primary source, curriculum guides, and other resources. The most beneficial to teachers are the resources like lesson plans and the guides to understanding the curriculum and the primary sources in regards to the collection. None of the libraries examined provided all of these valuable resources to the educator but rather a combination of some of the resources.
ONLINE EDUCATIONAL RESOURCES ON PRESIDENTIAL LIBRARY WEBSITES ADMINISTERED BY THE NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

Introduction

Presidential libraries were established to preserve the documents and legacies of the presidents who have served our country. Before the presidential library system many private groups and organizations had established foundations to preserve presidents’ collections such as the Thomas Jefferson Monticello Foundation for Thomas Jefferson and the James Monroe Museum and Memorial Library. However, these libraries were not sanctioned by the National Archives and Records Administration (herein after referred to as NARA) and the presidential library system, which has only covered the presidents since Herbert Hoover.

The presidential library system began in 1939 when Franklin D. Roosevelt donated his papers to the federal government and established a library and museum to preserve his presidential history. According to the Presidential Libraries: A Brief History on the National Archives website, “Roosevelt's decision stemmed from a firm belief that Presidential papers are an important part of the national heritage and should be accessible to the public. He asked the National Archives to take custody of his papers and other historical materials and to administer his library” (National Archives and Records Administration [NARA], 2010).

In 1950 Harry S. Truman followed suit by establishing a library and museum to store his documentation. Shortly after, the U.S. Congress passed the first of three acts.
In House Report No. 110 (2007), the Committee on Oversight and Government Reform summarized the Presidential Libraries Act (1955) as guidelines and procedures for federally maintained libraries and “…established a policy for creating federally maintained presidential libraries that are built with private funds. The Act requires foundations or other organizations to raise money and build the libraries” (NARA, 2010). Subsequently after they have been built and the president has left office, the libraries are then passed over to National Archives and Records Administration to administer.

The Presidential Records Act (1978) declared all documents created during the presidency as property of the state and directed these documents to be turned over to NARA once the president left office. It also legally made these documents public property rather than private property and set guidelines for the restriction and public access of these documents. “Specifically, the PRA allows for public access to Presidential records through the Freedom Of Information Act (FOIA) beginning five years after the end of the Administration, but allows the President to invoke as many as six specific restrictions to public access for up to twelve years” (NARA, 2010).

The Presidential Libraries Act (1986) required private endowments to be created to help relieve the financial obligations of NARA.

According to the National Archives and Records Administration website, there are currently thirteen presidential libraries administered by the Office of Presidential Libraries, a division under NARA. They include Herbert Hoover, Franklin D. Roosevelt, Harry S. Truman, Dwight Eisenhower, John F. Kennedy, Lyndon B. Johnson, Richard Nixon, Gerald R. Ford, Jimmy Carter, Ronald Reagan, George Bush, William J. Clinton,
and George W. Bush. These presidential libraries and museums are important resources for finding information regarding the Presidents of the United States of America. Each of the libraries also has a presidential library website where users can find information and digital collections of important historic documents. Presidential libraries are unique institutions because they are a blend of library, repository, archive, museum, and special collections. The Office of Presidential Libraries oversees the libraries and describes them on the website page Learn about the Presidential Libraries as,

…not traditional libraries, but rather repositories for preserving and making accessible the papers, records, and other historical materials of U.S. Presidents. Presidential Libraries and Museums are great treasures of our nation’s history. They are important sources for historians and other researchers studying our presidents and our history. In addition to archiving and preserving presidential papers and objects, presidential libraries and museums bring history to millions of visitors from around the world. (NARA, 2010)

Also, as these libraries begin to digitize their collections on their websites their collections are becoming more accessible. In a Report to Congress (2009) the libraries were mentioned in regard to the internet, “Over the last 20 years, the Internet has transformed information delivery and public expectations. It has also provided an opportunity for the Presidential Libraries to expand the knowledge of Presidential records to a much broader audience” (p. 29-30).

As a former teacher, the author found that she looked for websites that helped bridge the gap between primary source collections and the classroom by providing resources that were directed to the educator. This paper will explore the online educational resources available on the thirteen presidential library websites, particularly
the professional resources that provide helpful information to assist teachers in their classrooms.

**Literature Review**

The following section reviews the literature related to the research topic of this paper. Some literature regarding digital technologies and resources discusses how they have changed education as well as enriched it. These studies also highlight the effective presentation of these digital resources. Other studies focus on the presidential libraries themselves and the unique administrative and financial differences that each individual library faces. Studies focus on educational resources and initiatives in the presidential library system, discuss the types of educational programs, the change in them over the past 40 years, and where the programs have been provided.

**Educational resources on cultural heritage sites**

Some of the literature related to digital technology and resources on educational websites discusses how these resources enrich educational practices. For example, Weiss, Benmayor, O’Leary, and Eynon (2002) suggest that these new digital technologies and libraries, “…are transforming our classrooms from spaces of delivery to spaces of active inquiry and authorship” and are, “…empowering students to become researchers, storytellers, historians, oral historians, and cultural theorists in their own right” (p. 154).

These websites are particularly relevant to teachers and educators who can use them in their classroom without physically having to visit these sites. Lantzer (2003) supports this, saying “webpages offer museums the opportunity to do more than simply
advertise themselves to a national or even a global audience. They are places where museums can actually bring the educational experience right into the virtual visitor’s home or classroom” (Lantzer, 2003, para. 40).

Beal, Mason and Martorella (2009) agree and state, “Teachers and students are no longer limited by the resources within a school to learn about a topic….they now have access to millions of resources such as e-texts, movie clips, art, data, primary sources and maps” (p. 284). Also Bolick, Hicks, Lee, Molebash, and Doolittle (2004) state that by, “Providing teachers and students with opportunities to access materials for the purpose of historical inquiry will enrich history instruction in unique and powerful ways” (p. 212).

Other literature focuses on effective use of digital resources on cultural heritage sites. Digital archives and collections can be overwhelmingly vast and teachers need bridges to help them find the right material to use with their students. Teachers also need to teach historical context when using digital archives and to be able to scaffold student learning. Tally (1996) found that, “Teachers need, in short, lesson plans or student research guides, that suggest how parts of a vast collection can be used to accomplish common curriculum objectives, and that also suggest helpful supplementary reading.” Bolick et al. (2004) reinforce the importance of having resources about how to use the digital library resources like digital history toolkits, available to educators:

We believe that the most effective toolkits should include a combination of descriptive, analytical, and evaluative tools. While toolkits have some generalizable characteristics, they must [be reflections of] the idiosyncratic nature of the collection for which the toolkit has been developed. (p. 212)
Also there is an emphasis on the importance of the educator in the development of these resources. Cherry (2010) sees an issue with the development of some educational material for digital collections and argues that, “…there has been very little—almost nothing—written about educating the digitizers about more effective presentation of their materials for the schools (italics in original)” (p. 446-447). Although libraries and special collections have seen themselves as important to the dissemination and availability of historic information for education, Cherry states,

…there has been very little published in the professional archives and library literature concerning the research into cognitive development and historical thinking, not to mention the resulting strategies for structuring and contextualizing online primary source materials for the classroom. (p. 447)

**Presidential library systems**

Much of the research on the presidential libraries discusses how each library is administered and funded. According to the NARA website, each library is run by the Office of Presidential Libraries, which is a subgroup within NARA that, “…oversees budget submissions for the system [and] coordinates the development and implementation of NARA policies and procedures.” Each library also is administered by an “individual support organizations.” These organizations are responsible for planning, funding, and development while the president is still in office. These “support organizations provide significant support for the libraries' exhibit and public outreach programs, and education programs. Many also support archival functions such as digitization and preservation activities and provide funds to support archives aides and interns” (NARA, 2010).
Cochrane (2006) describes how each presidential library is funded and administered in very different ways. They are partly funded by NARA but also must seek additional private funding. She argues that these libraries and their exhibits, collections, and websites vary greatly in content, design, and accessibility from one another. She attributes this to the decentralized nature of the relationship between the library and the government.

Hackman (2006) argues that NARA should have a more active role in the administration of presidential libraries and implement, “better policies and practices” (p. 183). Hackman (2006) also argues that NARA’s top priority is to preserve government documentation of the current present and the most recent president who left office but that the entire system needs attention because, “the public, and prime supporters as well are unable to know what each library, individually and as part of this system, is seeking to accomplish and how”. He does not think that strategic planning would threaten the individuality of each library but rather,

Would raise the level of internal analysis and communication and improve decision making and the allocation of resources within libraries and across the system. And it should also improve communication, resource development, and program coordination with the nongovernment partners and supporters that NARA prizes so highly.” (p. 172)

**Education in presidential libraries**

In 2007 Baptiste bemoans the fact that, “It is very unfortunate that our Presidential Libraries have provided minimum resources to support their K-12 educational component” and “… that it has only been in the last five years that the
educational dimension at the Presidential Libraries has been given any real thought” (Baptiste, 2007).

Literature on educational programs is becoming more abundant as awareness that these institutions should be used for educational purposes also increases. Baptiste and Townsend (2008) found that before the 1970s there were no official education programs, “If ‘programs’ existed at all, they consisted mainly of worksheets for students to complete when their class visited the Library's museum” (Minimal efforts section, para. 1). Potter argues that around the 1980s libraries started encouraging the use of historical documents during visits or in the classroom and by the 1990s some libraries were participating in the National History Day Program (as cited in Baptiste and Townsend, 2008, Minimal efforts section, para. 2).

Hackman (2004) discusses that some libraries seemed to be more aware of the need to provide students and teachers with resources. He attributes this to several reasons:

- strong examples provided by the Hoover and Truman libraries in the late nineties,
- encouragement from the Office of Presidential Libraries which brought together education staff in the libraries, a 2000 survey and report on education programs in the libraries by the Office of Presidential Libraries, and the efforts of this office to help the libraries hire professional educators when opportunity has arisen. (p. 22)

In addition he finds that most decisions about the programs were coming from the individual libraries,

though the Office of Presidential Libraries has fostered the sharing of experience through more frequent meetings of specialists within the libraries, including education specialists and museum curators. But no significant policies or guidelines exist for these activities, and they do not appear to receive meaningful evaluation, either by the office of presidential libraries or, on its behalf, by others qualified to provide it. (p. 15)
Hackman argues that libraries lacked strategic plans and urges the Office of Presidential Libraries to require the libraries to have strategic visions, support the creation and planning of the plan and to publish them online.

Just two years later, Potter examines the development of educational programs that were available to both younger children and teens. She finds that the programs aimed at older students, “ranged from contests to the facilitation of on-site research and elaborate simulation experiences” (p. 135). Also she discusses the outreach efforts of the museums to bring education to the classroom like “traveling trunk programs and video lending libraries” (p. 136). Potter’s research primarily focuses on programs within the physical library and travelling outreach programs. She briefly notes that the websites offered,

a section specifically for educators and students, but they vary greatly on the depth and breadth of their offerings. Most explain procedures for scheduling guided tours for school groups, some offer detailed descriptions of their programs for educators and students, a few offer lesson plans…and all offer biographical information about their respective president. (p. 138)

The scope of what was available online to educators was not examined fully in this report.

The most recent research regarding the educational programs in presidential libraries is a study that compares Korea and the United States. Han (2011) examines the “educational programs, other education related programs, and special programs” (p. 49) available in these presidential libraries. Han compares the presidential systems of both countries and find that Korea lacks the services of educational programs found in the US presidential libraries while the US libraries had been creating and operating programs for
educating the public. Han provides suggestions for the Korean presidential library drawing from his observations of the U.S. libraries.

Han, like Potter, focuses on educational programs that were for the most part physical real-life experiences that would occur at Presidential Libraries and Museums like school group tours, programs, and professional development for teachers.

**Presidential libraries web presence**

Literature concerning the preservation of presidential library websites was available. Gupta conducts a case study using the Franklin D. Roosevelt Library and Museum and looks at the long time preservation goals. His goal is to “determine how these valuable collections can be preserved within an arbitrary persistent store in a scalable, infrastructure independent manner” (p. 3). He proposes an infrastructure-independent representation of Presidential Library websites and suggests that the data on these websites should be in a database.

Also, the Report to Congress (2009) mentions a few of the digital collections have been made possible when Presidential Libraries, “…have partnered with corporations, foundations, universities, and offices in the National Archives and their partners to use technology to make Presidential records and papers more accessible on the Internet with non-Federal funding” (p. 30). An example from the report would be the Presidential Timeline project (www.presidentialtimeline.org), which has, “…over 20 online exhibits, more than 1,000 digital objects, and a growing number of education modules for teachers” (p.30). Finally the Report claims that, “The Libraries will continue to use the digital world to reach broader audiences” (p.30).
Several observations can be made from the literature review presented above. First, the education world is moving to using more digital resources and thinking about how to most effectively present these to educators. Presidential libraries are unique institutions that house collections of primary sources that can be used for educational purposes by teachers. However, most of the literature on the resources has focused on the educational program in place at the physical libraries and fails to go into much detail about what is available online. The research in this study will focus on the educational resources available on the websites like lesson plans, curriculum alignments, primary sources, interactive exhibits, and virtual experiences that would be considered online educational resources. Another thing to consider is that many of the sites have been updated, revamped, or migrated to new sites in the past six years.

**Methods**

The purpose of this research was to investigate the current online educational resources available to educators on the thirteen presidential library and museum websites. A parallel purpose was also to determine the types of resources available and to examine the consistency of them from website to website.

All thirteen of these presidential libraries fall under the parent organization the National Archives and Records Administration (NARA) but were privately built and created by private non-federal funds. The funding and creation of each library was uniquely established and therefore so are each of their websites. When a user visits these sites they can immediately see the differences in organization, layout, and design among
these websites. However, a first glance at a presidential library website would not inform an educator of the variety and type of resources that would be available.

The web addresses for the thirteen presidential library websites administered by NARA were obtained from the National Archives Presidential Library and Museum’s page called “Visit the Libraries Online” at http://www.archives.gov/presidential-libraries/visit/websites.html and are included in Appendix A. This presidential libraries and museums website list did not include the current Barack Obama presidential library website which is currently still in development. Also the link from the NARA website to George W. Bush’s presidential website directs the user to a page that states that the website has moved to another address and provided the link http://www.georgewbushlibrary.smu.edu/. This link to the newer updated website was used for this study. Also the web address provided for Lyndon Baines Johnson’s Library and Museum redirected the user to http://www.lbjlibrary.org/ so this website was used instead of the one provided by NARA. This change in the LBJ website address was explained on the website:
For more than 40 years we've called ourselves the Lyndon Baines Johnson Library & Museum. And everyone else has called us the LBJ Library. From now on you'll see us embrace the name by which President Johnson is so well known. We are the LBJ Presidential Library.

Figure 1: LBJ Library: Explanation of the change in website address

The website addresses were compiled and then entered into a symbaloo.com account, which is a free site to bookmark websites, a quick and convenient way for the researcher to access to the presidential library website addresses.
The data was collected over a twenty-four hour period by the researcher to maintain accuracy and consistency in the collection of the information.

The data collected reflected the types of educational materials and resources that were available online. "Online" meant that the resources were found on the libraries’ identified servers, accessed using a computer and did not require the teacher or child to visit the specific presidential library or museum to use these resources. Past research has emphasized the educational programs available at the libraries and although they are educational resources, this study excluded programs that were located at the physical location and focused on the online resources. Lesson plans or activities that were intended to be used at the library like the webpage “Elementary School Field Trips to the Herbert Hoover Presidential Library-Museum Pre & Post Visit Activities”
This study investigated the educational resources available on the presidential library and museum websites particularly in respect to the lesson plans, multimedia resources, resources for helping teachers, biographical information about the president, and bibliographic resources. All of these sites have digitized material available for researchers and are valuable resources. However, this study was looking for already developed resources for educators. The presidential libraries and museums are different from one another and therefore it was important to develop criteria for each of the elements before recording it on a spreadsheet (see Appendix B).

**Educational Resources**

*Educational Resources* identified were resources that would help educators teach about the presidents and history without having to leave the classroom.

- Lesson plans:
  - Yes/No: Recorded if they did or did not have them. These lesson plans had to be hosted at the presidential library website not a link to an external lesson plan on another website.
  - Number: of lesson plans excluding ones that included a physical visit to the library.
  - Alignment: If the lessons were aligned to the state or national standards.
  - External lesson plans: the number of external lesson plans available.
• Teacher resource for using resources for understanding the state or national educational standards: This would include a page of the standards and what documents on the site would address those standards like this example from the Jimmy Carter Library and Museum.

![Jimmy Carter Library & Museum](image)

Figure 3: Jimmy Carter Library & Museum: Example of a web resource addressing the state curriculum standards

• Other online resources:
  
  o *Exhibits:* included both interactive and static exhibits but descriptions of exhibits that were permanently, currently, or previously on display at the museum were excluded unless the content from the exhibit was displayed. If there was a link to an exhibit on an external site it was also excluded like this one on the Gerald Ford website.
Virtual tours: video or virtual tour of the museum or library.

Interactive game: game for students to interact with on the site about the president or his lifetime.

Podcasts: podcasts with presidents, staff, library and museum staff, audio tours of museum were all included.

- Primary Source Resource: identified if there was a resource for using primary sources for learning; recorded it if it was targeted for both students and teachers specific help for teachers.

- Biographical Resource: not a link, not a source but historic information regarding the president and his life.

- Bibliographies: both bibliographies and links to online resources. List of links to online sources, external links, or reading lists.

Before collecting the data a sample experiment was conducted to ensure the criteria definitions were defined enough. To assess the rating system for the criteria
another librarian was asked to participate in a sample trial of extracting the information from the websites. This was performed to check the inter-rater reliability of the study meaning to examine the extent to which the two individual agreed. The information that the two individuals collected on the sample presidential library website were compared and discussed. Some of the criteria was tweaked and perfected before the researcher completed all of the research.

Results

Educational resources in this study referred to the online resources available to educators to assist them to teach in their classrooms without having to physically visit the library and museum. All of the websites were very different in their design and layout however every one of them had a place specifically for educators/teachers to use.

Eight of the thirteen (61.5%) libraries provided lesson plans on their websites. The number of lesson plans that each individual library offered varied as one can see in the graph on the following page:
The range of the number spans from none to almost two hundred lesson plans at the Truman Library and Museum. Some of the libraries and museums that were not included as offering lesson plans did offer a few lessons but they required the teacher and class to physically visit the presidential site. Also some of the libraries offered teaching suggestions, which teachers could use to produce lessons.

The combined number of lesson plans available to educators was 305. Of these 305 lesson plans all eight of the presidential libraries and museums had these aligned to the state standards of the state that they were located within. So one hundred percent of the lesson plans were aligned to the state standards and told teachers exactly what objectives could be taught with them.
Only two of the 13 libraries had links to lesson plans that were hosted on external websites. The two libraries that had external lesson plans available were the Nixon and Jimmy Carter Presidential Libraries and Museums. The Jimmy Carter Website had 22 external lesson plans, which were hosted by the Jimmy Carter Center. These 22 lessons were actually developed units and were rich with resources and primary documents.

Georgia state educators developed these units with money funded by Coca Cola. The Nixon Website had one external lesson plan, the link was to a lesson plan on the National Archives website titled “Teaching With Documents: Beyond the Playing Field - Jackie Robinson, Civil Rights Advocate” found at http://www.archives.gov/education/lessons/jackie-robinson/.

Teachers are responsible for teaching the state objectives to their students and are ultimately held responsible for doing so by state and federal testing. Resources for understanding how to use historic documents to meet state standards are important in assisting teachers in lesson and curriculum planning. Two of the 13 Presidential Libraries and Museums websites offered resources for helping teachers understand the documents in regard to the standards. This was a challenging one to measure because many of the websites did offer documents for assisting teachers and short blurbs about the standards in regard to lesson planning. However, this study was looking for resources that directed teachers to which documents/lesson plans would cover which standards. Just the Jimmy Carter and Franklin Roosevelt websites met the criteria laid out in the methods section of the study.
Multimedia features were present on the websites that could be used by teachers to enhance their classrooms. Most of the websites provided something in addition to a collection of primary sources for their users.

Online and interactive exhibits were recorded because of the potential use by educators to use them as teaching tools in the classroom without having to take a school trip to the library or museum. Eight of the 13 (62%) websites provided some sort of website that educators could use in their classrooms. Some websites hosted links to exhibits on other websites but were not counted as having exhibits unless they had online or interactive exhibits on their own site as well. Libraries and museums that only had exhibit descriptions of previous, current, or future exhibits were excluded because they did not provide enough information for teaching the material. The William J. Clinton Presidential Library was one such library that provided only description of an exhibit but lacked the content from the exhibit (as seen on the following page):
The exhibit above shows a past exhibit and while it has pictures of the exhibit it only has a description of the physical layout and not the content of the exhibit like the video or informational place cards present in the images. An example of an exhibit that was included as a research for teachers would be the Gerald R. Ford Library and Museum’s online exhibit about investigating Watergate (on the following page):
This exhibit allowed viewers to investigate Watergate from the trial to the Senate hearings, the battle for the tapes, trials and tribulations, and the aftermath. It also offered primary source documents for examining, an overview, people, a timeline, and movie reels.

Virtual/video tours in this study meant a virtual or video tour of the library or museum and was not referring to videos clips from the presidents’ archives. Three of the 13 (23%) libraries had virtual or video tours of the museum or library available for
viewing online. Although this did not include audio tours it is worth noting that the George H. W. Bush Library did provide an audio tour of the museum online.

Interactive games were available on two of the 13 (15%) websites; the Eisenhower and FDR libraries had these for students to play. The Herbert Hoover website had two games: for example, one of them on the Herbert Hoover website students could drive across America answering facts about the states that they were driving through:

![Interactive Game Example](image)

**Figure 8: An example of an interactive game**

It’s worth noting that the Lyndon B. Johnson website did not have a game, but that they used to have one on the previous website. LBJ Presidential Library and Museum was the newly migrated site but it is possible that some of the content still may be migrated to the newer site in the future.
Each site was examined to see if there were podcasts available to online users to listen or subscribe to. Podcasts in this case meant that they were podcasts of the presidents, staff, library and museum staff, or audio tours of museum. Five of the 13 (38%) websites provided access to podcasts.

As for having resources for understanding and teaching primary sources many of the websites provided information for understanding primary sources within a lesson plan or provided analyzing primary source worksheets for students. However only four of the 13 libraries provided a stand alone document/guide to assist teachers in teaching about primary sources like this one:

![Figure 9: An example of an online resource for understanding primary sources](image)

It is important to note that the Herbert Hoover resource was specific to understanding photographs as primary sources in the classroom but was included because it was a stand-alone resource. But if the websites that did include a lesson plan or
provided primary source worksheets for students for understanding primary sources then the number would be double and would be eight of the 13 libraries.

Biographical resources provide information, often chronological, about a person’s life. Students and teachers both can use these to discover more about the president but not specifically just his presidency. All 13 of the presidential websites offered online users biographical sketches of the presidents lives and most of them also had a biographical sketch of the first lady.

Bibliographic resources in this study were collections of additional books and/or websites about the president that users could use to find more information. Teachers can use these to quickly access more information for their professional knowledge or for their classrooms. 11 of the 13 (85%) websites had resources for learning more about the president. A few of these websites even provided separate lists one for teachers and one for students like the Gerald R. Ford Presidential Library and Museum’s website.

Conclusions

This study examined the educational resources available on the 13 presidential library websites that are administered by NARA. Each library had a section targeted to teachers or educators that helped them bridge the gap between the vast collection and teaching the material. The most useful resources for educators were the lesson plans and the resources that helped the educator with the primary sources in the collection as well as the curriculum connection guides. However, not one of the thirteen presidential library websites provided all three of these valuable resources. The results showed that the library websites varied in their combinations of different kinds of educational content.
available to teachers on the sites. This variety is due to the fact that these libraries are unique from one another and also that some have been more successful than others at procuring private funding to develop such resources on their websites. For example, at the Jimmy Carter Library and Museum, an educational grant from Coca Cola allowed the library to work with educators to develop rich educational units developed by teachers. However, it would have been beneficial to educators if these sites consistently provided them lesson plans, primary source resources, and curriculum guides regarding the collections to best inform their students in their classrooms.

Many of the libraries hosted content that was developed by educators for educators by providing educational summer seminars/workshops for teachers where these resources were created and then were put onto the websites. Educational specialists in these libraries need to seek and write grants to find money to fund programs that will foster collaboration between teachers and the library to produce these valuable resources. These resources need to continue to be created by educators in the state in which the library is located because they are the local experts.

Usability was not considered in this study but it is important to note that it may need to be further examined in regards to the education materials available online on these sites. Some resources may not have been identified because the author was unable to locate them on these sites. Also libraries could consider doing usability studies about their educational resources.

Furthermore, it would benefit the libraries to survey educators and teachers to learn about if and how they use the site, what resources they need for their classrooms, or
how they use the website currently for educational purposes. Surveys could be informal and could occur in the physical library when school teachers and classes visit, or online, or it could target teachers around the state where the presidential library is located.

In conclusion the presidential library websites have a web presence that has evolved over the years as the internet and digital collections have become more common place. Also schools and educators are seeking more resources online because of shrinking budgets. Digital collections are in a unique position where they can provide a bridge from the collections to the classroom. Teachers will benefit from websites that provide this bridge by providing these educational resources and clearly the presidential library websites are attempting to do this but still have a ways to go to in developing and providing these resources online.

</tbody>
</table>

**Hoover:** photographs  
**FDR:** Few suggestions in curriculum guide  
**LBJ:** on old website but has not been migrated to this new one  
**Nixon:** analysis worksheets for analyzing primary sources  
**Ford:** bibliographic info for both students and teachers  
**Ford:** analysis worksheets for analyzing primary sources  
**Carter:** Carter center website. LP are called units very well developed (Coca Cola funded), some of the units have resources for primary sources  
**Reagan:** one lesson plan addresses primary sources but not a resource on its own  
**GHWBush:** 12 lessons but had a required visit to the museum  
**GHWBush:** audio tour of museum mp3s
