

**Supplementary Figure 1: Comparison of cardiac performance measurements obtained at a rostral and caudal position along the dorsal aorta of a 48 hpf embryo.**  
**a)** In silico microangiogram of a 48 hpf zebrafish embryo showing the location of two scan lines used to acquire velocimetry data from a rostral and caudal location along the dorsal aorta. **b-e)** Peak velocity (b), peak acceleration (c), stroke volume (d), and cardiac output (e) obtained from rostral and caudal scan lines. Error bars represent the SEM, n=3.
